Summary

Software developer and Computer Science graduate (B.Tech, 2026) who builds full-stack MERN applications with RESTful APIs, JWT authentication and role-based access control. Built and deployed AgriMart, a multilingual marketplace with Razorpay test-mode payments, and a Streamlit app that forecasts crime trends in India. Working toward AI engineering through MangaCraft, an LLM agent with tool calling and project-specific memory. Comfortable with Java, Python, SQL, and data structures and algorithms.

Technical Skills

Languages: JavaScript (ES6+), Java, Python, SQL, HTML5, CSS3
Frontend: React.js, React Context API, Responsive Web Design, Internationalization (i18n)
Backend: Node.js, Express.js, RESTful APIs, MVC Architecture, JWT Authentication, bcrypt
Databases: MongoDB, MySQL, SQLite
AI / LLM (learning): LLM APIs (OpenRouter), tool calling, multimodal analysis, image generation, Gradio
Concepts: Role-Based Access Control (RBAC), Object-Oriented Programming, Data Structures and Algorithms, Payment Gateway Integration (Razorpay, test mode)
Data & ML (basic): Pandas, NumPy, Scikit-learn, Streamlit, Matplotlib
Tools: Git, GitHub, Postman, VS Code, Vercel

Projects

AgriMart – Agricultural Marketplace | *MongoDB, Express.js, React.js, Node.js, JWT, Razorpay* [GitHub] | [Live]
- Built a **bidirectional MERN marketplace** where farmers and suppliers can trade directly.
- Implemented **role-based access control** for 4 user roles, each with its own dashboard, secured with **JWT authentication**.
- Added a **six-language interface** using React Context and integrated Razorpay payments in test mode.
- Built an admin audit log that records administrative actions along with IP addresses.

MangaCraft – AI Manga Panel Assistant (V2 built; V3 in progress) | *Python, Gradio, OpenRouter, SQLite* [GitHub]
- Built a Gradio-based **AI agent** for manga artists using OpenRouter LLMs, with 7 tools the model picks via **tool calling**.
- Added multimodal panel and composition analysis, and reference-image generation, all through OpenRouter.
- Stored projects, conversations and **project-specific memory** in SQLite, isolated per project.
- Added streaming responses, rate limiting, conversation limits and error handling, with regression test scripts.

GramaCharitra – Village Heritage Platform | *React.js, Node.js, Express.js, MongoDB, JWT* [GitHub]
- Built a full-stack MERN application for preserving and exploring village histories, with an MVC backend, RESTful APIs and public read-only access to published content.
- Added an interactive commenting system and an admin panel for content management, protected with **JWT and bcrypt**.

Crime Data Analysis & Prediction | *Python, Pandas, NumPy, Scikit-learn, Streamlit* [GitHub] | [Live]
- Built a Streamlit app that forecasts crime trends across India using **Support Vector Regression (SVR)**.
- Cleaned historical Indian crime data with Pandas and NumPy and visualized geographic patterns as heatmaps.

Education

Vasireddy Venkatadri Institute of Technology (VVIT) Guntur, Andhra Pradesh
B.Tech, Computer Science and Engineering | *CGPA:* ***8.68/10*** *2022 – 2026*

Sri Chaitanya Junior College, Vijayawada | Class XII (BIEAP) | **94.5%** *2020 – 2022*

Sri Chaitanya Techno School, Vijayawada | Class X (SSC) | **99%** *2019 – 2020*

Certifications

Programming in Java (NPTEL / edX) | Google AI-ML Virtual Internship (EduSkills)

Creative Practice

Pencil and pen sketching of anime and manga characters since the second semester of B.Tech; currently exploring digital art and building visual composition skills and attention to detail.
