SUMMARY

Motivated Computer Science undergraduate (2026 batch) with a strong foundation in full-stack web development using the MERN stack and programming languages like Java, Python and JS. Experienced in building scalable applications with RESTful APIs, JWT authentication, and secure database management. Adept at working independently and delivering end-to-end software solutions.

EDUCATION

Vasireddy Venkatadri Institute of Technology (VVIT) <i>Bachelor of Technology in Computer Science and Engineering CGPA: 8.68</i>	Guntur, AP 2022 - 2026
Sri Chaitanya Junior College <i>Class XII - BIEAP Percentage: 94.5%</i>	Viayawada, AP 2020 - 2022
Sri Chaitanya Techno School <i>Class X - SSC Percentage: 99%</i>	Vijayawada, AP 2019 - 2020

PROJECTS

AgriMart – Full-Stack Agricultural Marketplace <i>MERN, Razorpay, JWT, i18n</i>	[GitHub]
– Architected a bidirectional marketplace allowing farmers and suppliers to trade directly, eliminating middleman costs. – Developed a secure Role-Based Access Control (RBAC) system with 4 distinct user roles and personalized dashboards. – Integrated 6-language support via React Context and the Dummy Razorpay Payment Gateway for secure digital transactions. – Implemented a Security Audit Log that tracks administrative actions and IP addresses to ensure platform accountability.	
GramaCharitra – Village Heritage Platform <i>React.js, Node.js, Express.js, MongoDB, JWT</i>	[GitHub]
– Developed a full-stack digital archive for rural communities to preserve and explore verified village histories. – Implemented an interactive commenting system to drive community engagement and gather feedback on records. – Engineered a secure Admin Panel using JWT and bcrypt, enabling authorized users to manage data while maintaining a read-only public experience. – Architected the backend using the MVC pattern and RESTful APIs to ensure clean code separation and scalability.	
Crime Data Analysis & Prediction <i>Python, Streamlit, SVR, Scikit-learn</i>	[GitHub]
– Developed an interactive web app utilizing Support Vector Regression (SVR) to forecast crime trends with high accuracy. – Trained the model on multi-year historical datasets to assist law enforcement in proactive resource planning. – Visualized Indian states crime patterns through Geospatial Heatmaps to identify and monitor high-risk areas. – Built a Python-based data pipeline to clean and normalize raw datasets for improved machine learning performance.	

TECHNICAL SKILLS

Programming: Java, Python, SQL
Frontend: React.js, HTML5, CSS3, JavaScript (ES6+), Responsive UI
Backend: Node.js, Express.js, RESTful API Design
Databases: MongoDB, MySQL
Data & ML: Numpy,Pandas, Streamlit, SVR (Scikit-learn), Matplotlib, Seaborn
Tools: Git, GitHub, VS Code, Postman

CERTIFICATIONS

Programming in Java – NPTEL / edX
Google AI-ML – EduSkills (Cohort-13)
Blue Prism Intelligent Automation – EduSkills (Cohort-7)
Celonis Business Analyst – EduSkills (Cohort-8)
ZScaler Networking – EduSkills (Cohort-9)
Introduction to MS Excel – Simplilearn
